

IT 109 Project - NBA Statistics Tracker

Chande Campbell, ccampb
Keith Ragin, kragin
Daniel Asamnew, dasamnew

Project Description:

This project aims to display a statistics application that takes input from NBA games and can average these stats for the NBA regular season. This application will allow the averages of NBA players from 2-5 games to be tracked within an application through the use of dictionaries and mathematics.

Specifications of project:

Users will be given a menu to choose whether to track 2-5 games. When the user inputs 'g' a prompt for the number of games will appear for user input, users will then be prompted with the input for the player's name. Then prompt for user input of points, assists, rebounds, blocks, and turnovers. If the user inputs 'B' a prompt asks for 2 names of two teams. Upon completion, the user is prompted for a point total of teams. Then prompt the user for the top scorer along with their points scored, assists, and rebounds. If the user inputs 's', a prompt asks for the wins and losses of multiple teams to create a standings sheet ranking the teams from best to worst. If the user inputs 'e', it will end the program.

```
How many games (2-5)? 3

Game 1:
Enter points: 34

Game 2:
Enter points: 21

Game 3:
Enter points: 2

Player Stats per Game:
Game 1: Points = 34
Game 2: Points = 21
Game 3: Points = 2

Summary:
Games Played: 3
Total Points: 57
Average Points per Game: 19.00
